Extract Method

```
class Main {  
  constructor() {  
    window.fetch('hoge.json')  
      .then(response => response.text())  
      .then(json => {  
        const myName = Reflect.get(json, 'name');  
        const myAge = Reflect.get(json, 'age');  
        const myAddress = Reflect.get(json, 'address');  
        console.log(myName, myAge, myAddress);  
      });  
  }  
}
```

```
class Main {  
  constructor() {  
    window.fetch('hoge.json')  
      .then(response => response.text())  
      .then(json => {  
        const myName = Reflect.get(json, 'name');  
        const myAge = Reflect.get(json, 'age');  
        const myAddress = Reflect.get(json, 'address');  
        console.log(myName, myAge, myAddress);  
      });  
  }  
}
```

選択箇所から爆速関数生成

```
class Main {  
  constructor() {  
    window.fetch('hoge.json')  
      .then(response => response.text())  
      .then(json => {  
        const myName = Reflect.get(json, 'name');  
        const myAge = Reflect.get(json, 'age');  
        const myAddress = Reflect.get(json, 'address');  
        console.log(myName, myAge, myAddress);  
      });  
  }  
}
```
